THE BREATHING MATTRESS

AND MUCH MORE TO ENSURE HEALTHY SLEEP FOR BABIES AND CHILDREN

2027

TRÄUMELAND, OUR DREAMLAND

„"We develop and create products as if they were for our own children"

The most beautiful thing for parents is probably watching their baby sleep. Safe and sound. We have known this feeling (and our responsibility) for over 50 years.

Babies change the world and companies

Because we are trusted by so many mothers and fathers, we produce our baby products to the best of our knowledge and conscience. Because good, restful sleep is important, both for children and parents. This is why our high-quality products guarantee your baby not only a comfortable night's sleep, but also a healthy lying position.

Developed and manufactured with the greatest care to accompany your child safely into dreamland every night.

THE BREATHING MATTRESS.

We only want the best for babies and rely on high-quality and strictly tested materials. It is particularly important to us that the mattress can breathe. Therefore, when developing new products, we focus primarily on ventilation systems and the prevention of heat build-up.

Ventilation in the mattress core

Through appropriate ventilation channels in the mattress core, special contour cuts or a 3D air cushion layer, the CO_2 exhaled by the baby is eliminated and unhealthy heat built-up is avoided. Optimum air circulation allows the baby to breathe more freely and sweat less.

Air permeable mattress covers

Our covers are particularly breathable and promote optimal air circulation so that your baby can sleep peacefully and safely.

- Raw materials from Central Europe
- 14,000m² of production space

- mindful use of resources

More information

MADE IN AUSTRIA

Regional production

We are extremely proud that all of our mattresses are 100% produced at our site in Upper Austria, In this way, we always guarantee that our products are of high quality and are processed by highly qualified personnel. At our company, people and technology work hand in hand. State-of-the-art production methods are brought together with the experience, craftsmanship, and dedication of our skilled employees. While modern technology ensures precision and consistency, it is the human touch (the care, expertise, and attention to every detail) that makes the difference. The result is mattresses made with precision and a genuine commitment to quality.

We use resources mindfully

When a baby sleeps peacefully, it is one of those truly special moments for parents—a sense of safety, security, and being well cared for. We understand this feeling—as well as the responsibility that comes with it. For over 50 years, everything at Träumeland has revolved around ensuring a good night's sleep for babies and children. As a family-owned company, we develop and manufacture our products with extensive experience, great care, and a commitment to creating items that we would choose for our own families.

In doing so, we look beyond the present. We are mindful of using materials as efficiently as possible, repurposing production offcuts, and avoiding unnecessary waste.

Many of our materials are sourced from Europe, and a large portion of our products is manufactured right here in Austria.

For us, responsible production means looking closely at every detail: Where do our materials come from? How can we make better use of existing resources? And how can we develop products that will serve families for a long time?

This is how Träumeland products are created—with a deep attention to detail, short supply chains, over five decades of experience, and a sincere desire to use the resources available to us as carefully as possible.

Mix & Match harmonious Träumeland articles for children's bedrooms

CERTIFIED QUALITY

All products are tested by independent testing institutes to guarantee safe and healthy baby sleep. to guarantee safe and healthy baby sleep. You can rely on our products, because excellent quality means everything to us.

OEKO-TEX Standard 100 certifies that our products and materials are suitable for use in baby beds. All our mattresses are certified in class 1 (for babies), in which the limit values are particularly strict.

FKT tested for harmful substances
The quality seal of the "Förder-gemeinschaft" identifies body-compatible textiles that do not release any substances that could irritate the skin or harm the body.

Recommended by midwives: More than 100 independent midwives have examined and tested the LIEBMICH sleeping bag.

DOWNPASS guarantees a controlled animal husbandry. No down or feathers from live plucking, cage farming or foie gras production are used.

LGA labels mattress foams that are low in emissions and pollutants.

CertiPUR-certified foams – tested against defined requirements regarding health- and environment-related constituents and VOC emissions.

kbA stands for "controlled organic cultivation". This means that there are no artificial fertilisers, pesticides or defoliants.

Träumeland mattresses are tested in accordance with the **DIN EN 16890 standard**, and undergo continuous further development.

You can find the corresponding certifications for each product at **www.traeumeland.com**.

MATTRESS CATEGORIES

Our mattresses are divided into different categories: Basic, Comfort, Premium, and Nature. Depending on the quality criteria the mattress meets, it is classified into the respective category. Some examples of quality criteria are material, type of cover, ventilation, and reinforced edges, among others.

Mattresses that cover all the basics but don't offer any special extra features.

Mattresses with ventilation chan-nels, integrated wetness protection, reinforced edges and good lying comfort.

Mattresses made of high-quality materials with optimal ventilation, integrated wetness protection, ventilated reinforced edges, excellent lying comfort and other great features.

In addition to the three quality levels, we also offer mattresses made from special natural materials.

Here you will find more information and videos

WHAT TO

BABY MATTRESSES

BABY MATTRESSES

MATTRESS CORE

Integrated ventilation channels

Ventilation channels in the mattress core or a 3D air cushion layer ensure that the baby's exhaled CO_2 is evacuated and no harmful heat builds up.

Supports head shape development

Baby mattresses should be made of point-elastic materials so that they can adapt to the shape of the baby and offer the perfect degree of hardness for their soft bone structure.

Baby side and toddler side

Two different degrees of hardness to protect the spine. We recommend turning the mattress from the baby side to the toddler side once the baby reaches a weight of 12 kilograms.

Reinforced edges

Placed on the long side of the mattress, they provide secure support during your baby's first attempts to stand up in the bed.

3D Comfort Pads

Thanks to their three-dimensional shape, the 3D comfort pads react with particular point elasticity and relieve pressure where it occurs.

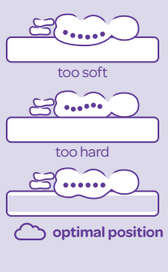

Air cushion layer

It makes the mattress incomparably breathable and ensures optimal lying comfort. This allows babies to breathe more freely and sweat less.

Ergonomic lying comfort

Babies' spines are not yet fully developed. A high-quality mattress, whose core optimally relieves pressure on the spine while supporting it to form a line as straight as possible. Mattresses that are too hard or too soft are unsuitable for babies' soft bone structure. At Träumeland, we make sure that our mattresses meet these ergonomic requirements.

MATTRESS COVER

Suitable for allergy sufferers

Washable at 60°C

Removable or divisible mattress cover

A mattress cover should always be removable and washable. What is more, a divisible mattress cover is particularly practical: If something goes wrong, the mattress cover can simply be split, put the underside on top and the baby can go back to sleep. This gives you enough time to wash the dirty side.

Integrated wetness protection

High-quality mattress covers stop wetness and keep the mattress core dry, such as the Träumeland multifunctional cover Sleep Safety. What makes it special is that, unlike conventional wetness protection covers, it remains breathable.

Air permeable mattress covers

Your baby can breathe better if the mattress cover is breathable: even the best mattress cannot prevent heat build-up if the cover does not allow enough air to pass through. That is why the mattress must breathe.

Multifunctional cover Sleep Safety

Breathable and water-repellent at the same time: the cover stops moisture at the surface without the need for a waterproof mattress protector. At the same time, your baby can breathe freely even when its mouth is in direct contact with the mattress. In addition,TENCEL™ fibers prevent perspiration.

SMALL MATTRESS

0 to 6 months

FOR CRADLES, BASSINETS, CO-SLEEPERS AND MUCH MORE

WHY IS IT IMPORTANT FOR BABIES TO HAVE THEIR OWN MATTRESS?

Prams often have integrated mattresses of low quality, and in this case a high quality mattress should also be used. Especially when buying second-hand prams, the existing mattress should be replaced immediately: the baby has to create its own microbiological environment, otherwise **allergies** can develop.

GOODBYE
SLEEPLESS
NIGHTS!

DID YOU KNOW THAT ...

... monotonous noises such as "white noise" can help your baby fall asleep? According to one study, 16 out of 20 babies fell asleep within 5 minutes when listening to "white noise". Without sound, it was only 5. Even the sound of a hair dryer and the gentle sound of the sea can work wonders. Our more than 10,000 users rate this app with an average of 4.5 stars.

ALL ADVANTAGES AT A GLANCE:

- Many **different sounds**
- Easy to play
- **Timer function** to control the playback time
- **Endless loop** for uncomplicated playback
- It can be played in **flight mode**
- Including **valuable tips on the subject of baby sleep**
- **Always at hand** on your smartphone (wether at home, out for a walk, on holiday or with the grandparents)
- **Without annoying advertising**

BABY MATTRESSES

0 to 5 years

FOR BEDS IN SIZES 60 X 120 CM OR 70 X 140 CM

Available in custom sizes upon request

WHAT IS THE BEST MATTRESS FOR A BABY CRIB?

Choosing between so many different models is certainly not easy. That's why you'll find great explanatory videos on all mattress functions on our website to help you understand the differences from each other. See also pages 8 and 9.

Why is a well-ventilated mattress so important?

The essential thing when buying a baby mattress is to choose a "breathing mattress", which you might have already read or heard before. But why is this like this, and what does it really depend on? The combination of **air-permeable mattress covers and ventilation systems** in the mattress core ensures that babies can **breathe freely** and don't sweat in their cot. Air channels and air-permeable materials allow air to circulate within the mattress, This allows CO_2 exhaled by the baby to be evacuated and prevents dangerous overheating.

How hard may a baby mattress be?

Many parents are uncertain about the right degree of hardness for baby mattresses. However, the basic principle is: not too hard and not too soft. Since the spine of newborns is not yet fully developed, a **point-elastic mattress core** is of great importance, especially in the first months of life. It optimally relieves the spine of pressure and at the same time provides **support so that it can develop healthily**, which also prevents the **development of a flat head**. As one of the main components of the mattress, the material of the mattress core plays an important role.

OVERVIEW OF BABY MATTRESSES

You will find small mattresses for cradles, bassinets, co-sleepers and much more from page 10 onwards.
Baby mattresses: for cots in sizes 60 x 120 cm and 70 x 140 cm.* From this page onwards.
*Marked models can be produced in special sizes up to 75 x 160 cm upon request.
You will find children's and youth mattresses in standard sizes from page 28 onwards.

Quality points
Our points system provides simple and reliable guidance through our range of baby mattresses. The more quality points a mattress has, the more additional features it has.
For detailed information about our cores and covers, see pages 8 and 9.

- Integrated ventilation channels
- Supports head shape development
- Baby side and toddler side
- Ventilated reinforced edges
- 3D comfort pads

Precious moments before falling asleep

Putting children to bed can become a nice routine. A daily recurring process creates a calming familiarity that contributes greatly to healthy, restful sleep. This ritual, which can be personalised, not only shortens the time it takes to fall asleep, but also deepens the relationship between parents and children in a very special way. There are different options for this:
❤ Lullaby ❤ Finger play ❤ Music box ❤ Baby massage ❤ Baby bath

Every baby should have its own mattress
It is very unhealthy for babies to sleep on a used mattress, as it can cause **allergies and skin problems**. In addition, the **risk of sudden infant death syndrome** is also significantly higher in babies sleeping on "handed-down" mattresses. If the mattress comes from an older **sibling**, the risk is lower, but we still recommend buying a new mattress for each baby.

Harmful substances? Not with us!
We only use "good" materials in our products so that babies can sleep safely. Children's sensitive skin reacts more quickly to harmful substances than adults' (after all, their immune system is not yet fully developed). Baby products are a matter of absolute trust and that is why regular strict quality controls are self-evident for us: independent testing institutes also test our products regularly.

BUTTERFLY

Height: 11 cm
Cover: Multifunctional cover Sleep Safety with side ventilation band

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated wetness protection and TENCEL™ (it absorbs humidity)
- Side ventilation band

Core: 3D comfort pads in a cute butterfly design

- Integrated ventilation channels
- Supports head shape development
- Baby side and toddler side
- Ventilated reinforced edges
- 3D comfort pads

SEA OF CLOUDS

Height: 11 cm
Cover: Multifunctional cover Sleep Safety with side ventilation band

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated wetness protection and TENCEL™ (it absorbs humidity)
- Side ventilation band

Core: Well-ventilated cold foam thanks to 3D air cushion layer combined with 3D comfort pads

- Integrated ventilation channels
- Supports head shape development
- Baby side and toddler side
- Ventilated reinforced edges
- 3D comfort pads
- 3D air cushion layer

BREEZE

Height: 11 cm
Cover: Multifunctional cover Sleep Safety with side ventilation band

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated wetness protection and TENCEL™ (it absorbs humidity)
- Side ventilation band

Core: Well-ventilated cold foam thanks to extra breathable 3D air cushion layer combined with 3D comfort pads

- Integrated ventilation channels
- Supports head shape development
- Baby side and toddler side
- Ventilated reinforced edges

- Extra high 3D air cushion layer

SEA OF STARS

Height: 12,5 cm
Cover: Multifunctional cover Sleep Safety with side ventilation band

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated wetness protection and TENCEL™ (it absorbs humidity)
- Side ventilation band

Core: Cold foam with breathable 3D comfort pads to support the spine

- Integrated ventilation channels
- Supports head shape development
- Baby side and toddler side
- Ventilated reinforced edges
- Ventilated 3D comfort pads

Only available in the size of 70 x 140 cm

Available in custom sizes upon request

SPRING AIR

Height: 12 cm
Cover: Multifunctional cover Sleep Safety with side ventilation band

Core: Thermo-regulating Cellpur foam with highly flexible 3D comfort pads for excellent point elasticity

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated wetness protection and TENCEL™ (it absorbs humidity)
- Side ventilation band
- Integrated ventilation channels
- Supports head shape development
- Baby side and toddler side
- Ventilated reinforced edges
- 3D comfort pads
- 3D air cushion layer

MOUNTAIN

Height: 11,5 cm
Cover: Multifunctional cover Sleep Safety with extra wide side ventilation band and TENCEL™ x REFIBRA™, fibers with recycled content

Core: Highly flexible cold foam air cushion twists combined with a 3D air cushion layer for perfect air permeability.

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated wetness protection and TENCEL™ (it absorbs humidity)
- Extra-wide ventilation band
- Integrated ventilation channels
- Supports head shape development
- Baby side and toddler side
- Ventilated reinforced edges
- 3D comfort pads
- 3D air cushion layer
- Made with value-added materials

AIRKISS

Height: 12,5 cm
Cover: Multifunctional cover Sleep Safety with innovative side ventilation band

Core: Combination of breathable special foam Breeze and viscoelastic foam

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated wetness protection and TENCEL™ (it absorbs humidity)
- Innovative ventilation band
- Integrated ventilation channels
- Supports head shape development
- Baby side and toddler side
- Ventilated reinforced edges
- 3D comfort pads
- 3D air cushion layer

NATURE LUCK

Height: 9 cm
Cover: Organic cotton from controlled organic cultivation

Core: Coconut combined with natural latex and covered with breathable sheep's wool fleece

- Divisible cover
- Washable up to 40°C
- Integrated ventilation channels
- Baby side and toddler side
- Natural materials

Good to know
To save CO_2 during transportation, our youth mattresses are delivered rolled up. In the video we show what to pay attention to when unpacking.

WHY SHOULD I BUY A SPECIFIC MATTRESS FOR CHILDREN AND TEENAGERS?

Because a child's spine is not fully developed, it needs a children's mattress that yields only where pressure is exerted. Children's bones grow much faster than their muscles, so an unsuitable sleeping surface can be detrimental to spinal development. This, in turn, can trigger **posture problems, back pain and tension**, because children's weight and size differ considerably from those of an adult.
Our children's and youth mattresses are suitable for children from 2 years old and up to 15 years old, or up to a body weight of 90 kg or 120 kg.

Two degrees of hardness
We have developed our children's and youth mattresses with 2 different degrees of hardness (soft and medium-hard) to ensure optimum comfort for children and teenagers. We recommend to turn the mattress from the soft to the medium-hard side at a weight of approx. 35 kg.

Best materials
Cosy, soft TENCEL™ covers reduce sweating and keep the cot dry. Breathable materials create a comfortable sleeping environment. No moisture protection in the cover. You can find mattress protectors on page 40.

PASTEL DREAM

Height: 12 cm
Cover: Viscose composite fabric

Core: Ventilated cold foam

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated ventilation channels

CLOUD PALACE

Height: 15 cm
Cover: Viscose composite fabric

Core: Good point elasticity thanks to high-quality cold foam, 3-layer sandwich construction, nubbed structure and wave contour cuts

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated ventilation channels
- Children's side and youth side

UNIVERSE

Height: 14 cm
Cover: Viscose composite fabric

Core: Cold foam with wave contour cut

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated ventilation channels
- Children's side and youth side

SLUMBERLAND

Height: 15 cm
Cover: TENCEL™ composite fabric with side ventilation band

Core: Cold foam with highly flexible 3D comfort pads for excellent point elasticity

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Side ventilation band
- Integrated ventilation channels
- Children's side and youth side
- 3D comfort pads

Available in custom sizes upon request

FULL MOON

Height: 14 cm
Cover: Viscose composite fabric

Core: Cold foam with cube contour cut

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Integrated ventilation channels
- Children's side and youth side

Available in custom sizes upon request

WIND

Height: 15 cm
Cover: TENCEL™ composite fabric with side ventilation band, 8% recycled cotton and TENCEL™ x REFIBRA™, fibers with recycled content

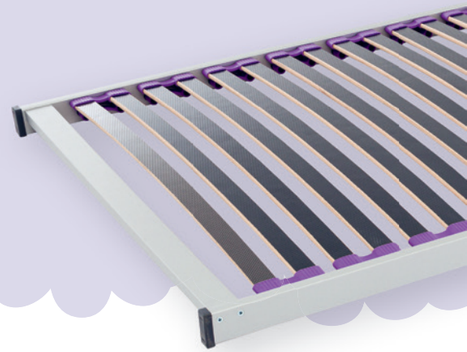

Core: It consists of 50% value-added raw materials, combination of high-quality flakes and special foam

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Side ventilation band
- Integrated ventilation channels
- Children's side and youth side
- Made with value-added materials

Bedtime support
Parents can also lie down on the mattress with their child to help them fall asleep. It is important that the mattress is turned regularly (head and foot sections) so that the weight load is balanced.

Adjustable bed insert
The adjustable mattress insert grows with children, accompanying them for many years, and can be easily adjusted to their body weight. As long as the child weighs less than 35 kg, the light gray spring bar should be positioned at the head end. Starting at 35 kg, the mattress insert can be rotated, ensuring it continues to provide optimal support and a comfortable sleeping experience. With a load capacity of up to 120 kg, it is particularly stable and durable.

FOREST AIR

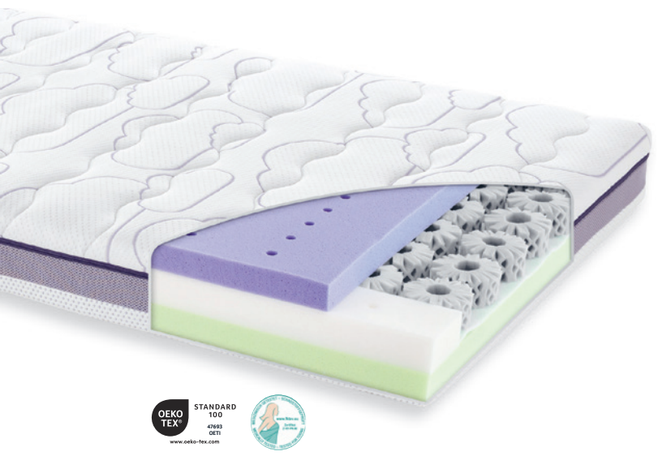

Height: 15 cm
Cover: TENCEL™ composite fabric with side ventilation band

- Suitable for allergy sufferers
- Washable at 60°C
- Divisible cover
- Side ventilation band

Core: highly flexible Cellpur foam with unique moisture management and wave contour on both lying surfaces

NEST HOME AIR

- Breathable 3D-air-cushion-layer prevents sweating
- Optimum lying comfort and protection of the spine thanks to high-quality mattress
- More stability and safety thanks to the stable frame
- Without openings, straps or catch points
- Ideal for home or traveling

Cover: Top side: 100% cotton jersey with 3D air cushion layer. Bottom side: 100% polypropylen
Mattress and frame: 100% soft foam

Lying surface: 65 cm, **Age:** 0 – about 7 months

NEST REDUCER AIR

It reduces the size of the baby nest to give newborns even more security.

Cover: 100% cotton jersey with 3D air cushioning layer
Filling: 100% polyester fiber
* Nest reducer available for marked designs

It is also perfect for the co-sleeper bed or the pram.

Mattress toppers: when do they make sense?
A mattress protector can be used from birth onwards, providing reliable protection against moisture, stains and wear and tear (whether from minor accidents, leaky nappies or spilled liquids). This keeps the mattress hygienically clean and ensures it lasts longer. Mattress protectors are particularly important during the period when children begin to go to the toilet and no longer wear nappies at night.

WETNESS PROTECTION COVERS

AIRSAFE 3D

Waterproof bed cover combined with 3D air cushion layer to improve air circulation

Material: Upper side: 3D air cushion. Bottom side: cotton molton with internal PU membrane

Sizes: 40 x 50 cm, 40 x 90 cm, 50 x 70 cm, 60 x 120 cm, 70 x 140 cm, 60 x 80 / 110 cm (Aero), 70 x 112/155 cm (sebra), 68 x 122 / 162 cm (Oliver Furniture), 90 x 200 cm, 120 x 200 cm, 140 x 200 cm

Sizes: 40 x 90 cm, 60 x 120 cm, 70 x 140 cm, 90 x 200 cm

AIRDRY

Waterproof bed cover combined with 3D air cusion layer. The wetness protection is in the central area only, resulting in unique permeability in the head and foot area.

Material: Top side: 3D air cushion, bottom side: partly molleton made of cotton with internal PU membrane

Sizes: 60 x 120 cm, 70 x 140 cm

DUVETS AND PILLOWS

MADE FROM DIFFERENT MATERIALS FOR EVERY SEASON

WHICH
DUVET
IS THE RIGHT ONE?

With so many duvets available, it's not easy to make a decision. The TOG value and the material of the cover and filling of the duvet can be used as the primary factors for selecting the right blanket.

TOG value
The **unit of measurement "TOG"** shows the thermal resistance of textiles and shows how warm the baby will be with them at certain room temperatures. The higher the TOG value, the warmer the baby is. The TOG value is standardized and is tested in special procedures. (1 TOG = 0,1 m^2K/W)

Material
Duvets made of TENCEL™ are known for their excellent moisture management; cotton duvets ensure good air circulation; down duvets are airy and light; and special fiber duvets are very easy to care for.

Certificates
Our duvets are developed in compliance with the DIN EN 16779 standard and are certified under the OEKO-TEX Standard 100.

Which size is the right one?
As long as the baby sleeps in the **cot or bassinet**, a duvet measuring **80 x 80 cm** can be used. If the baby already sleeps in a **crib**, the **100 x 135 cm** size is the right one. A duvet measuring**125 x 170 cm** is the perfect size for children sleeping on **the floor** . For the **youth bed** , we recommend the sizes **140 x 200 cm (AT)** and **135 x 200 cm (DE)**.

Down? Yes, but...
Tested quality is our top priority, which is why all our down products are Downpass certified.

The downpass standard guarantees:
- 100 % traceability from the farm
- Controlled animal husbandry (no live plucking, no cage farming, no foie gras production)

BABY DUVETS & PILLOWS

TENCEL™
The innovative TENCEL™ natural fibre absorbs significantly more moisture than cotton and therefore ensures an even drier and healthier sleeping environment.

Pillow Sabbia
Soft children's pillow to cuddle into: particularly breathable thanks to a side ventilation band.

SLEEPING BAGS

FOR COZY AND SAFE SLEEP

WHAT TO

LOOK OUT FOR

BABY SLEEPING BAGS

Sleeping bags are the best alternative to blankets: using sleeping bags instead of conventional blankets significantly reduces the risk of the baby becoming warm or overcovered.
Tip: Never use a baby blanket and baby sleeping bag together, as this is too warm and can lead to dangerous overheating.

Recommended by midwives

As midwives are the closest people to parents-to-be and their opinion is particularly important to us, we asked more than 100 midwives about our LIEBMICH sleeping bag. The result: our LIEBMICH sleeping bag is recommended by midwives!

Adjustable ventilation

The ventilation slits in the sleeping bag can be opened with zippers and allow optimum air supply as required, which prevents the baby from overheating. It ensures optimum air circulation and **lowers the temperature** in the sleeping bag by 3°C within 5 minutes.

Tested for antimony & harmful substances

All our sleeping bags **have been tested several times and independently for harmful substances** and have been proven to be suitable for use in baby beds. We also use **antimony-free materials.**

The right size

A baby sleeping bag should fit snugly for safe sleep, but still offer enough room for your baby to move freely and sleep in comfort. If the sleeping bag is too loose, the neckline may slip over the baby's face, increasing the risk of suffocating.
As a general rule: Your baby must grow out of the right sleeping bag. If the baby grows into the sleeping bag, then it is too big!

Formula: Baby's height from shoulders to toes + 10 cm = the ideal baby sleeping bag size.

What clothes should babies wear under the sleeping bag?

It is not possible to make general statements here, as sleeping bags vary in warmth. It is very important not to be tricked by the thickness of the sleeping bag material.

TOG value

The **unit of measurement "TOG"** shows the thermal resistance of textiles and shows how warm the baby will be with them at certain room temperatures. The higher the TOG value, the warmer the baby is. The TOG value is standardized and is tested in special procedures.
(1 TOG = 0,1 m^2K/W)

More information

INNER SLEEPING BAG

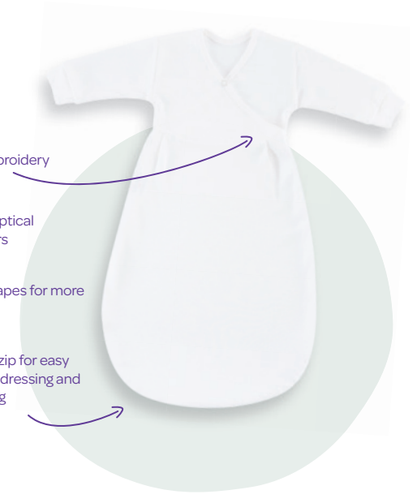

Material: 100 % cotton

Sizes: 44, 50, 56, 62, 68, 74, 80, 86

0,3 TOG

Also available in a 3-piece set with the LIEBMICH all-yearsleeping bag.

- Heart embroidery
- Without optical brighteners
- Without tapes for more safety
- All-round zip for easy changing, dressing and undressing

Why swaddle?
Swaddling reminds the baby of the familiar closeness and security of the womb in the weeks after birth. The swaddle sleeping bag is pleasantly tight and has a calming effect. Are you wondering how hard babies should be swaddled? Then the Träumeland swaddle sleeping bag is the perfect choice because the shape and tightness are already predetermined!

SWADDLE SLEEPING BAG AIR

Träumeland care

TRÄUMELAND CARE

PRODUCTS DEVELOPED WITH EXPERTS

for optimum support for babies and to promote healthy motor development

FOR A HEALTHY AND
SAFE SLEEP FOR BABIES

CHANGE SIDES AS OFTEN AS POSSIBLE

Mrs Heinzl, how do malpositions and deformities develop in babies?

Many deformed heads develop during pregnancy due to the restricted position (e.g. if the mother's pelvis is too narrow) or due to increased pressure during birth (e.g. birth with a suction cup). Later, such deformations are caused by positioning babies on one side. The fact that babies have recently been sleeping mainly on their backs, which reduces the risk of sudden infant death syndrome, has led to an increase in flattening on the back of the head.

What are the consequences?

A deformed head is not only visible from an aesthetic point of view, but also affects the infant's entire posture, motor skills, and perception. With a flattened or laterally deformed cranium, the head always rolls onto the flat area, which often leads to motor problems. Babies find it difficult to turn round and their development is delayed. Other consequences include asymmetries of the spine and increased tension in the upper cervical joint and the jaw muscles. Affected babies are often very restless or cry a lot.

How can this be treated?

For babies with cranial deformities, the aim is to take the pressure off the deformed area, not only in practice but also in daily use at home. I used to have to improvise when it came to equipment, for example using towels to support the lateral position. I now use the side positioning set from the Träumeland Care range. Moreover, I recommend the CAREFOR pillow for babies with deformed heads, which can be used to relieve the pressure on the deformed area. This was not possible until now.

What advice do you have for parents on preventing this?

From the very beginning, they should make sure that their babies are repositioned during the day, turned to the other side again and again, but not carried on one side all the time. It is also a good idea to change the position of the cradle frequently so that the baby does not always turn in one direction towards the light source or the noise of playing siblings.

And when do children need support?

The Care range is also used for prevention: as babies should sleep on their backs during the night, the Carefor pillow prevents head deformation. If babies like to sleep on their side, the side positioning set prevents them from rolling onto their tummy. It was very important to me that the products stimulate motor and sensory skills: The prone position, for example, which is an important prerequisite for crawling, is not favoured by many babies, and the wedge cushion makes it easier for them. By the way, the cuddly nest is a particular success for the little ones: it fits perfectly and stabilises their body position. That's why I also recommend the cuddly nest for babies who tend to cry a lot.

„Placing the infant on one side can negatively affect the head shape, posture, motor skills and perception. To prevent such asymmetries, I have developed the Care product line in collaboration with Träumeland. Of course, all of these products are also well ventilated.“

Maria Heinzl has been working as a pediatric physiotherapist for around 20 years and regularly treats babies with deformed heads or unbalanced posture.

CUDDLY NEST

For better body awareness and motor development

- Elevating the feet strengthens the muscles and prepares the baby for sitting up.
- It prevents hyperextension of the spine, as it relieves tension in the neck muscles.
- Perfect for soothing colic: it relaxes the stomach and counteracts tummy ache.

Cover: 100 % cotton jersey
Filling: Polyester down fibre beads

Length: 170 cm

It can also be used in the prone position to promote motor development.

SIDE STORAGE PILLOW

It keeps the baby stable in the side position. It can be used later as a sleeping and travelling pillow.

Cover: 100 % cotton jersey
Filling: Fine, low-noise EPS beads

Length: 98 cm

BABY PILLOW CLOUD

Cuddly pillow

Cover: Multifunctional cover Sleep Safety with TENCEL™ x REFIBRA™– fibres with recycled textile content
Filling: Viscoelastic Waterlily natural foam, combined with 3D air cushion layer, with vertical ventilation channels

Sizes: 40 x 25 x 3 cm, 40 x 60 x 3 cm

breathable 3D material

Perfect pressure relief (viscoelastic foam)

SIDE POSITIONING SET

For safe stabilization in the supine or lateral position Regular repositioning from the right to the left side prevents pressure points and head deformation. Three-piece set

Cover: 100 % polyester
Filling: Soft foam
Mat: 100 % Polyester

Size: Mat: 28 x 50 cm, rollers: 27 x 13 x 9 cm, 27 x 7 x 10 cm

WEDGE CUSHION

for perfect elevation, especially when suffering from a cold and for babies who spit up

VISCO

Cover: integrated 3D air cushion layer for unique air permeability, removable, washable
Filling: Viscoelastic foam for perfect body adaptation

Size: 32 x 40 x 6 cm

MAXI

Cover: Polyester, removable and washable
Filling: High-quality cold foam with vertical ventilation channels

Size: 60 x 35 x 7 cm

It can also be used in the prone position to promote motor development.

normally developed head
Use the pillow for prevention without removing its content.

Flat developed head (brachycephaly)
Use the pillow without removing its content. The head adapts itself to the hollow.

Oblique head (plagiocephaly)
Remove some of the pillow contents from the area where the head is protruding.

CAREFOR DEVELOPMENT PILLOW

For the prevention and treatment of head deformation. Unique dual-chamber system for optimum adaptation to the baby's head. It includes a removable and washable cover.

Relation: TENCEL™ and elastane, removable and washable
Pillow: Made of breathable 3D air cushion layer, it prevents sweating in the neck and back of the head area
Filling: Polyester down fibre beads

Sizes: Midi: 23 x 26 cm, Maxi: 26 x 28 cm

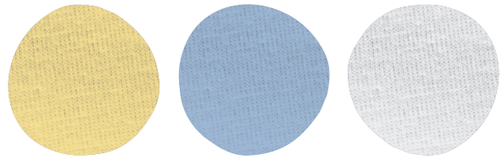

CUDDLY SOFT COVER

Carefor developmental pillows and baby pillows Cloud have hotel closure

Material: 97% TENCEL™, 3% elastane

Size: 25 x 40 cm Additional sizes are noted in the color description.

ALL MATERIALS AT A GLANCE

For the production of Träumeland articles, only carefully selected materials are used.

Types of foam

Soft foam
is a classic polyurethane foam that is frequently used as a base material.

Cold foam
Compared to soft foam, cold foam has higher quality raw materials, offers improved point-by-point elasticity, is more breathable and has a longer durability. Ventilation channels and contour cuts further optimize ventilation and adaptability.

Cellpur foam
contains the natural raw material TENCEL™, which is obtained from wood. It provides high elasticity, absorbs moisture very quickly, and helps maintain a comfortably dry sleeping environment.

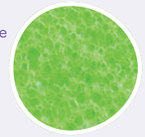

emc®sensitive foam
was originally developed for the medical field. Thanks to its antibacterial properties, it is particularly hygienic and ideal for people with allergies.

emc®verde foam
This high-quality foam is characterised by very high air permeability and a gel-like pressure distribution to relieve the spine. It contains castor oil, which is extracted from the seeds of the tropical castor bean plant—a natural, renewable raw material.

Special foam Breeze
It is particularly breathable and ensures excellent airflow. It supports rapid moisture absorption and pleasant temperature regulation, thus contributing to a balanced sleeping environment.

Upcycled flake foam
This foam consists of approximately 50% recycled raw materials. High-quality cold foam remnants are crushed into flakes to create composite foam and then reshaped under pressure from still liquid cold foam.

Latex coconut
Coconut fibers are a purely plant-based padding material with good climate-regulating properties. They help maintain a dry sleeping environment and provide stable, natural cushioning. In latex-treated coconut, the fibers are additionally reinforced with rubber milk, which improves air permeability and elasticity.

Natural latex
is obtained from the sap of the rubber tree and is one of the highest quality types of latex. It is breathable, temperature-regulating, point-elastic and possesses natural antibacterial properties. It is therefore particularly suitable for allergy sufferers.

Octaspring®
Thanks to its 3D flexibility, high breathability, and lightweight structure, the patented Octaspring technology offers a particularly comfortable sleeping experience.

Viscoelastic foam
It reacts to body pressure and adapts perfectly. The open-pored structure ensures good air permeability and a comfortable experience.

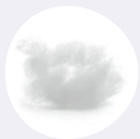

Functional and special materials

3D air cushion layer
Due to the countless individual polyester threads, it is incomparably air-permeable and highly point-elastic. It promotes good air circulation, reduces heat buildup, and helps babies sweat less.

Polyester
A durable and elastic fiber that is particularly well-suited for long-lasting mattress covers.

Antibacterial polyester
Polyester treated with an antibacterial finish inhibits bacterial growth, thereby promoting hygienic use. At the same time, the fiber remains durable, elastic, and easy to care for.

Wash fleece
it is made of polyester and, as a washable hollow-fiber fabric, is particularly easy to care for. It provides soft, supple padding and is well-suited for hygienic applications.

Thermal fleece
it is made of polyester and provides soft, plush padding. Among other things, it is used in changing pads and helps ensure a comfortable lying position.

Four-hole high-tech hollow fiber
Four-hole high-tech hollow fibers are hollow inside and particularly lightweight. They promote active air circulation, help ensure good thermal insulation, and provide a pleasantly soft sleeping surface.

Elastane
is an extremely stretchy and supple fiber. It ensures high elasticity in the fabric and supports a good fit as well as pleasant comfort.

Microfiber
is a general term for particularly fine fibers. Microfibre fabrics are exceptionally soft and keep their shape. This makes them ideal for durable and comfortably soft textiles.

PU membrane
is water-repellent and provides reliable protection against moisture. This makes it particularly suitable for products where additional protection against moisture is important.

Natural Fibers & Natural Materials

Cotton
is one of the best-known and most widely used natural materials. It is breathable and very durable. Therefore, it is particularly suitable for use in a baby bed.

Organic cotton (kbA)
kbA stands for controlled organic cultivation. This means that there are no artificial fertilisers, pesticides or defoliants. Organic cotton is pleasantly soft, breathable, and especially gentle on the skin.

Recycled cotton
Recycled cotton is produced by reusing cotton scraps. By adding cellulose, the raw material is processed into new fibers to produce fabrics.

Cotton crinkle
is a soft fabric with a distinctive, slightly crinkled texture. Thanks to the elastane content, it is particularly supple and pleasantly soft. At the same time, the fabric is breathable, absorbent, and durable.

Cotton jersey
is a soft, breathable, and durable fabric. Its elastic structure makes it feel pleasant on the skin and it is ideal for clothing and bedding.

Cotton muslin
Muslin is a loosely woven, breathable cotton fabric. Thanks to the elastane content, it is particularly supple and pleasantly soft. Therefore, it is particularly suitable for use in a baby bed.

Cotton satin
is a fine-weave, smooth cotton fabric with a slightly lustrous surface. The fabric feels pleasantly soft and is particularly well-suited for high-quality textiles.

TENCEL™ (Lyocell)
An innovative cellulose fiber derived from wood sourced from controlled or certified origins. TENCEL™ fibers are distinguished by their soft feel and moisture-regulating properties. They absorb moisture and release it back into the surrounding environment, thereby promoting a pleasantly dry and balanced sleeping climate.

REFIBRA™
The innovative TENCEL™ x REFIBRA™ technology utilizes textile waste as a raw material for new cellulose fibers. Recycled textile materials are processed together with wood-based pulp into new fibers, effectively reintroducing them into the production cycle.

Swiss pine
The Swiss stone pine grows in the high mountain regions under extreme climatic conditions and under controlled forestry management. Swiss stone pine wood is known for its pleasant, natural scent and can help create a cozy sleeping environment.

Sheep's wool
is a natural fiber with high moisture absorption. It absorbs and releases moisture effectively, thereby helping to maintain a comfortably balanced sleeping environment.

Filling materials

EPS beads
are fine, soft, and quiet little beads. Thanks to their high adaptability and good pressure distribution, they are particularly well-suited as filling material for nursing pillows.

Down fiber balls
are made of polyester fibers and have excellent lofting properties. They provide a soft, loose filling and are therefore used, among other things, as filling material for pillows.

Down and feathers
Unlike feathers, down is particularly light, soft, and has no visible quill. It provides comfortable thermal insulation and a cozy, snug feel. Träumeland products are of the highest quality and do not come from live plucking.

Kapok
is a natural plant fiber that is particularly light and soft. The fiber naturally possesses water-repellent properties and promotes a pleasantly dry sleeping environment.
