SLEEP, BABY SLEEP

THE TRÄUMELAND BABY & CHILDREN'S MAGAZINE 2020
WELCOME TO TRÄUMELAND

THE SAFEST PLACE IN THE WORLD
For parents, the most wonderful joy of all is to watch their baby when it is sleeping. Safe and protected. We have known this feeling - and our responsibilities - for over 50 years now.

Because we enjoy the trust of so many mothers and fathers, we produce our baby items to the best of our knowledge and beliefs. Good, relaxing sleep is important - for children and for parents. For this reason, our high-quality products not only guarantee a pleasant night’s sleep for your baby, but also a healthy lying position. Developed and produced with the greatest of care so that your child is well-protected every night on its way into dreamland.

Gabi + Hannes Nösslböck
OVERVIEW OF OUR PRODUCTS

DUVETS & CUSHIONS
66 BABY DUVETS & BABY CUSIONS

36 CHILDREN’S PILLOW
For special support of the cervical spine.
42 TRÄUMELAND-CARE
Pillow’s for promotion of healthy motor skills development
MATERIAL:
As one of the main components of a mattress, the mattress core material plays an important role. Through a point-by-point elastic mattress core, the spine is optimally relieved of pressure and yet supported so that your baby’s backbone can develop healthily.

TIP: Mattresses which are too hard are not suitable for the soft bone structure of a baby. With our products, you can be certain: All our mattresses have the correct degree of hardness.

What is the difference between soft foam, cold foam and special foams?
Basically, all types of foam can be used in a baby bed. However, there are differences in the breathability and the lying comfort. Cold foam has a better air permeability than conventional soft foam and adapts perfectly to accommodate the body. Some models are also made from special foams. These special foams are generally treated cold foams, and are therefore more breathable than normal cold foam. They also relieve the spine more effectively.

AIR CUSHION LAYER:
3D air cushion layers are incomparably breathable and extremely point-by-point elastic. This allows your baby to breathe more freely, and sweats less.

REINFORCED EDGES:
Reinforced edges on the longitudinal sides of the mattress are provided for the first attempts at standing in the baby bed. Since step edges on the head and foot side are too hard for baby heads, we produce our mattresses deliberately with step edges only on the long sides of the mattress.

3D COMFORT PADS:
Due to their three-dimensional shape, 3D comfort pads react with high point-by-point elasticity, and relieve any sources of pressure. They thus provide optimum support for your baby’s spine. In addition, they guarantee optimum ventilation.

BABY SIDE AND TODDLER SIDE:
Two different degrees of hardness in order to protect the spine. It is recommended to turn the baby side over to the toddler side from a weight of 12 kilograms.

Every element of our mattresses has been clearly thought through. This applies to the materials processed and to the structure of the mattresses. We are constantly working on optimisations in functionality, and thinking in terms of the years ahead. So that your baby has a healthy sleep.
REMOVABLE COVER VS. DIVISIBLE COVER:

Removable mattress cover: All our mattress covers are removable and washable.

Divisible mattress cover: Some models also have a divisible mattress cover. The two bed surfaces of the cover are divisible. If the bed is soiled, simply divide the mattress cover, flip the underside to the top and your baby can continue to sleep. You then have enough time to wash the soiled side. Later, you can simply zip the two sides of the cover together and have a complete mattress once again.

QUALITY POINTS:
Our points system ensures easy and reliable orientation through our baby mattress program. The more quality points a mattress has, the higher its quality. There are a few factors to consider, depending on what you find important:

- Good ventilation
- The quality of the mattress cover and core and additional functions.

CERTIFIED QUALITY

We give you security, as outstanding quality is a matter of course for us. For this reason, all of our products are tested by independent test institutes – so that babies can sleep healthily and safely.

ÖKO-TEX STANDARD 100

confirms that our products or materials are eminently suitable for use in baby beds. All our mattresses are class 1 certified (for babies). The limit values in this class are especially stringent.

TOXPROOF

The TÜV Rheinland Group (Technical Inspection Agency for the Rheinland region) regularly inspects for maintenance of the stringent styrene evaporation criteria and provides you with the security of knowing that the product you have bought is free of harmful substances.

FKT

The “medically tested and tested for toxins” seal of the “Fördergemeinschaft körperverträglicher Textilien” identifies body-compatible textiles from which no substances detach which might irritate the skin or harm the body’s health. All Träumeland mattress covers bear this seal.

CERTIPUR

verifies the safety, health-related suitability and environmental compatibility of the foam materials used.

KBA

stands for controlled organic cultivation. Absolutely no artificial fertilizers, pesticides or defoliants are used.

LGA

identifies mattress foams which are free of emissions and harmful substances.

MATTRESS COVERS TESTED FOR ANTIMONY & HARMFUL SUBSTANCE

The Träumeland seal identifies mattress covers which have been tested for antimony and harmful substances.

DOWNPASS

guarantees controlled animal husbandry. No down & feathers from live plucking, cage-rearing and foie gras production are used.

You can find the appropriate certificates on the respective product at www.traeumeland.com!
I trust in Träumeland, because I want only the best for my children.

WHICH MATTRESS IS RIGHT FOR MY BABY?
When choosing from so many different models, the decision is certainly not easily made. On our Träumeland website, you will therefore find great explanatory videos on all the mattress functions that will help you choose the right mattress.

www.traeumeland.com/DE/videos

WHY IS A VENTILATED MATTRESS SO IMPORTANT?
Of primary importance when purchasing a mattress is the selection of a "breathing mattress". Most of you have surely already read about these or heard of them. But why is this the case, and what is really important here? The combination of air-permeable mattress covers and ventilation systems in the mattress core ensure that your baby can breathe freely and does not sweat in their bed. Air channels and breathable materials cause the air within the mattress to circulate. CO₂ exhaled by the baby is transported away, and unhealthy heat accumulations are avoided.

HOW HARD MAY A BABY MATTRESS BE?
Many parents are uncertain regarding the correct degree of hardness for baby mattresses. The following basic principle applies: Not too hard and not too soft. Because the spine of new-born babies is not yet fully developed, a point-by-point elastic mattress core is of particular importance in the first months of life. A point-by-point elastic mattress core optimally relieves the spine of pressure and yet supports it so that your baby's backbone can develop healthily. Of course, as one of the main components of the mattress, the mattress core material and quality play a particularly important role (you can find more information on page 6).

Scientists have conducted research which suggests that it is very unhealthy for babies to sleep on a used mattress. This can lead to allergies and skin problems, and also the risk of “sudden infant death syndrome” is substantially higher for babies sleeping on “hand-me-down” mattresses. If the mattress has been handed down from an older sibling, then this risk is substantially lower. In spite of this, we recommend that you procure a new mattress for each baby.
You can obtain all cot mattresses in the sizes 60 x 120 cm and 70 x 140 cm, as well as in special dimensions up to a size of 75 x 160 cm.

TRÄUMELAND 23
HEALTHY SLEEP FOR HEALTHY BABIES

HARMFUL SUBSTANCES? NOT IN OUR PRODUCTS!

We only use “good” materials in our mattress covers, allowing babies to sleep risk-free. A child’s sensitive skin reacts much more quickly to harmful substances than an adult’s does – the reason being that children’s immune systems are not fully developed.

Products for baby’s pose a question of trust. Regular, strict quality controls are a matter of course – a commitment which Träumeland always certifies by means of quality marks and assessments by independent testing authorities.

In September 2019, our baby mattress Rainbow Basic 70 x 140 was distinguished with Öko-Test “excellent” - we are especially proud of this!

THE POLLUTANT MONSTER

1 Life is not easy for the people of Mattress Island: Evil polluting pirates frequently try to invade. It’s happening again today – the pirates want to come onto the island!

2 But the islanders are not frightened for long, because... ...the hungry Pollutant Monster is here!

3 He greedily devours the polluting pirates, before they can set foot on the island.

4 Woohoo! The good old monster has saved Mattress Island once again!
You can obtain all cot mattresses in the sizes 60 x 120 cm and 70 x 140 cm, as well as in special dimensions up to a size of 75 x 160 cm.

You can find extra-high FITTED SHEETS for this mattress from page 84!
Bedtime should always be a routine. When you do the same things every night at bedtime, the calm your baby finds in this familiarity helps her fall into healthy, restorative sleep. This ritual can be whatever you want it to be. A bedtime routine not only shortens the time it takes for baby to fall asleep, but also deepens the relationship between babies and their parents in a very special way. Here are a few loving ideas:

- Lullabies
- Finger games
- A musical toy
- Infant massage
- Bath for baby

You can obtain all cot mattresses in the sizes 60 x 120 cm and 70 x 140 cm, as well as in special dimensions up to a size of 75 x 160 cm.
THE POSITIVE EFFECT OF THE SWISS STONE PINE:

Swiss stone pine is THE new natural material for sleeping areas, having a positive effect on well-being and health. The Swiss stone pine contributes towards a quicker and more efficient recovery process whilst asleep and has been proven to deter moths and mites and prevent the formation of mould.

1 MOISTURE ABSORPTION
Through sheep wool fibre (enhanced with Swiss stone pine chippings) for a healthy sleeping environment

2 SECURITY
Reinforced edges made of Swiss stone pine wood for even more safety

3 100 % NATURAL
The entire mattress is made from 100 % natural materials

4 TEMPERATURE-BALANCING
Thanks to a breathable sheep’s wool sheath

5 PREMIUM COMFORT
Finest natural latex on the baby (nubbed structure) and toddler side

6 TOP VENTILATION
Through vertical air channels on the baby and toddler side

WHY SHOULD I BUY A SPECIAL KIDS' AND YOUTH MATTRESS WHEN I CAN ALSO BUY AN ADULT MATTRESS?

A child’s weight and height is very different from the weight and height of an adult. In addition, growing children have different sleeping requirements than adults.

- Two degrees of hardness, especially for kids and adolescents
- A perfect sleeping climate due to “mattresses which breathe”
- Cuddly-soft TENCEL™ covers for a dry and natural sleeping climate.
KIDS’ AND YOUTH MATTRESSES

2 TO 15 YEARS OR UP TO 70 KG
FOR BEDS IN SIZES 90 X 190 CM, 90 X 200 CM,
100 X 200 CM, 120 X 200 CM, 140 X 200 CM
KIDS' AND YOUTH MATTRESSES

You can obtain the mattresses in sizes 90 x 190 cm | 90 x 200 cm | 100 x 200 cm | 120 x 200 cm | 140 x 200 cm and in special sizes up to 160 x 200 cm.

"HOME"
THE BREATHING NEST

SLEEP SNUGLY, JUST LIKE IN MOM’S TUMMY

Whether the Träumeland nest “home” is placed in your bed or a cot, used as an insert in a pram, or simply placed on the sofa, your baby will sleep consistently and comfortably, and above all, without sweating.

TENCEL™ natural fibres
Absorbs significantly more moisture than cotton, and therefore ensures dry and healthy sleeping conditions.

Outer fabric: 70% TENCEL™, 30% cotton
Filling: Hollow fibre in the form of polyester beads
Lying surface: high-quality cold foam, combined with a 3D air cushion for incomparable ventilation

Cover: Filling: Mattress:

Lying comfort
High-quality mattress to protect baby’s spine

Ventilation
No sweating, thanks to the breathable 3D mesh on the bed surface.

Adjustable
Reduceable with a cord
Enlargeable for unfolding

0–8 MONTHS
FOR A HEALTHY AND SAFE SLEEP FOR BABIES

SWITCH SIDES AS OFTEN AS POSSIBLE

For approximately 20 years now, Maria Heinzl has worked as a child physiotherapist, and repeatedly treats babies with deformed craniums or with a one-sided body posture.

Ms Heinzl, how do malpositions and deformities in infants occur?
Many deformed craniums develop during the pregnancy due to constricted conditions (for example in case the mother’s pelvis is too narrow) or through increased pressure during the birth (for example a suction bell birth). Later, such deformities result through the one-sided positioning of infants. The fact that in recent years babies mainly sleep on their backs in order to reduce the risk of sudden infant death syndrome has increasingly led to flattening of the back of the head in infants.

What are the consequences?
A deformed head isn’t just cosmetically prominent, but also has an effect on the entire body posture, motor skills and cognition of the infant. In the case of a flattened or side-deformed cranium, the baby’s head will always roll onto the flat area. This frequently causes problems with motor skills. Such babies find it hard to turn over, and are repeatedly delayed in their development. Other consequences are also asymmetries of the spine and increased tension, for example in the upper head joint and the jaw musculature. Affected babies are frequently very restless or ‘cry’ babies.

How can it be treated?
In the case of babies with cranium deformities, it’s important to take the pressure off the deformed area, not only at the practice, but also in daily application at home. I used to have to improvise using various aids, for example towels, for example to support a baby in side position. I now take the side positioning set in the new Care line. I recommend the CAREFOR cushion for babies with deformed heads. Using the cushion, the pressure can be taken away from the deformed area; this wasn’t possible beforehand.

What advice do you give to parents?
How can they prevent the problem?
From the start, they should ensure that they repeatedly change the position of the baby, switching sides and also not always carrying them on one side. It is also good to change the position of the cot frequently so that the baby is not always turned towards and light source or towards noise from their siblings as they play.

And in which cases do babies need support?
The Care line can also be used for prevention purposes: because infants should sleep on their backs at night, the CAREFOR cushion prevents deformation of the head. If an infant likes to sleep on their side, the side positioning set stops them from rolling onto their tummy. For me, it was very important that the products stimulate motor and sensory skills: for example, many babies dislike lying on their stomachs; and yet this is an important prerequisite for crawling - a wedge cushion makes things easier for them. The Cuddly nest, by the way, is absolutely great, in particular for very small babies: it fits perfectly and stabilises the position of the body. For this reason, I like to recommend the Cuddly nest for ‘cry’ babies, too.
PRODUCTS DEVELOPED WITH EXPERTS
FOR THE OPTIMUM POSITIONING OF YOUR BABY
AND FOR THE PROMOTION OF HEALTHY MOTOR DEVELOPMENT

DID YOU KNOW, ...

... that one-sided positioning of an infant can have a negative effect on the head shape, body posture, motor skills and perceptive capacities?
CAREFOR DEVELOPMENT CUSHION

SPECIAL BABY CUSHION TO PREVENT AND REMEDY DEFORMATION OF THE HEAD.

Unique 2-chamber system for optimum adaptation to the baby's head. Prevents deformation and remedies already-existing deformations. Removable and washable cover included.

CUSHION: 100% polyester | Made from breathable 3D air pockets; prevents sweating in the area of the neck and back of the head.

FILLING: 100% hollow fibre in the form of polyester beads

COVER: 97% TENCEL™, 3% elastane, removable and washable

SIZES: mini: 22 x 25 cm, midi: 25 x 28 cm, maxi: 28 x 32 cm

Use cushion for prevention purposes without removing cushion content.

NORMAL: NORMALLY DEVELOPED HEAD

Use cushion for prevention purposes without removing cushion content.

BRACHYCEPHALY: FLAT-DEVELOPED HEAD

Use cushion for prevention purposes without removing cushion content. Baby's head adapts to the cavity.

PLAGIOCEPHALY: ASYMMETRIC HEAD

Remove a little bit of the cushion content at the position where the head bulges.

Can be flexibly adjusted to the baby’s size with a band.

COVER: 100 % cotton-jersey

FILLING: 100 % hollow fibre in the form of polyester beads

LENGTH: 170 cm
WHY SHOULD MY BABY SLEEP IN A SLEEPING BAG?

Sleeping bags are the better alternative to covers, as the use of baby sleeping bags instead of conventional covers substantially reduce the risk of a heat build-up or of the baby’s head being covered up.

TESTED BY MIDWIVES

Since nobody is closer to expectant parents as the midwife and their opinion is especially important to us, we have interviewed more than 100 midwives about our LIEBMICH sleeping bag.
LIEBMWICH
SLEEPING BAG
THE BREATHING SLEEPING BAG
A healthy sleep due to natural fibres
The innovative TENCEL™ fibre absorbs substantially more moisture than cotton, and thus ensures an even drier and healthier sleeping climate.

WHAT MAKES LIEBMICH SLEEPING BAG SO UNIQUE?

LIEBMICH AVANTAGES

Double ventilation regulation
The two ventilation slits on the sleeping bag can be opened using zips and permit an optimum air supply depending on requirements. This stops the baby overheating.

Tested for antimony & harmful substances
All our products have been tested multiple times and independently for antimony and harmful substances, and are verifiably suitable for use in baby beds.

### TIPS FOR SLEEPING BAG SELECTION

**WHICH SIZE IS THE RIGHT ONE?**

The right size for the sleeping bag for babies is generally measured according to the body length of the baby.

Body length
- Head length
+ 10 cm

= Reference measurement for sleeping bag size

In general: Your baby must grow out of the suitable sleeping bag. If your baby still has to grow into the sleeping bag, the bag is too large!

### WHICH CLOTHING CAN MY BABY WEAR INSIDE THE SLEEPING BAG?

It is impossible to make generalised statements here; as sleeping bags differ in warmth. Do not be fooled by the thickness of the sleeping bag material. The measuring unit “TOG” can be drawn upon as a reference value. “TOG” indicates the thermal conductivity resistance of textiles and tells you how warm your baby is at a certain room temperature in a particular sleeping bag. The higher the “TOG” value, the warmer the baby. The clothing of your baby should be adapted according to the appropriate “TOG” value.

WHICH DUVET IS RIGHT FOR MY BABY?

The numerous duvets available make the choice more difficult. For the selection of a suitable duvet, thermal requirements and the duvet and filling materials should primarily be considered.

- **Thermal requirements**: Is a summer, winter, all-year round or combination duvet required?
- **Material**: Duvets made from TENCEL® are well-known for their outstanding moisture management; cotton covers provide good air circulation, down covers are airy and lightweight and special fibre covers are very easy-care.

WHICH DUVET SIZE IS RIGHT FOR MY BABY?

As long as your baby sleeps in a cradle or bassinet, you can use a duvet in the size 80 x 80 cm. If your baby already sleeps in a cot, then the size 100 x 135 cm is suitable.

**NATURE**

Made from 100 % KBA cotton. This cotton is 100 % natural, with moisture control, and anti-allergic and extremely skin-friendly properties. Warmth is transmitted efficiently: in summer, the blankets keep you cool, and in winter they keep you warm. KBA stands for controlled organic cultivation. This means that absolutely no artificial fertilisers, pesticides or defoliation agents are used.

**DOWN**

Down blankets with new class I white down and feathers, which are not obtained from living animals, satisfy with their air-permeable, temperature-balancing and moisture-controlling effect. They are wonderfully airy & light.

**SPECIAL FIBRES**

Special fibres are lightweight and pleasant on baby’s skin. They offer ideal environment control and dissipation of moisture. Furthermore, they distinguish themselves by their breathability and durability.

**ONLY THE BEST**

Tested quality is our supreme virtue, which is why all our down products are marked with the Down pass.

**THE DOWNPASS STANDARD GUARANTEED:**

- ★ 100 % traceability from the farm
- ★ Controlled animal husbandry (no live plucking | no cages | no foie gras production)
OUR BEDDING CONSISTS OF FINEST COTTON-SATIN, IS CUDDLY-SOFT AND PROCESSED TO A VERY HIGH QUALITY
BEDDING & ACCESSORIES
FOR A DREAMLIKE SLEEPING ENVIRONMENT
BEDCLOTHES
FOR A CUDDLY SLEEPING PLACE FOR YOUR BABY.

BEDCLOTHES
Two-piece set made from finest, soft cotton. Duvet cover with zip at the bottom end. Pillow cover with hotel flap for easy removal.
Material: 100 % cotton
Sizes: 100 x 135 cm + 40 x 60 cm
80 x 80 cm + 35 x 40 cm

DRAPE
Suitable for all standard drape rods
Material: 20 % cotton, 80 % polyester

BUMPER
Easy to fasten with binding threads, suitable for cots in size 60x120 or 70x140, length: 182 cm
Material: 100 % cotton + 100 % polyester fleece

IN CUTE PACKAGING
With enchanting figures to cut out.
One bedding set contains one drape, one bumper, one large duvet cover (100 x 135 cm) and one large pillow cover (40 x 60 cm).
One bedding set contains one drape, one bumper, one large duvet cover (100 x 135 cm) and one large pillow cover (40 x 60 cm).
NURSING CUSHIONS
ENSURES A COMFORTABLE PREGNANCY AND RELAXATION WHEN BREAST-FEEDING

If you like, you can have a look in @traumeland. Here you can find short good night stories for children and funny videos and posts to induce sweet dreams. If you have a great picture that you would like to share with us, you are welcome to do so using the hashtag #träumeland

We are looking forward to seeing you!
Fitted Sheets

Cuddly soft! In different qualities! Many different colours!

- Excellent elasticity and good stretchability
- Quick and easy to put on
- Crease-free fit through stitched edges and rubber band all round
- Non-iron

TENCEL™ (100% TENCEL™)

TENCEL™ ensures a particularly dry, healthy sleeping climate, is soft as silk and therefore very skin-compatible.

OVERVIEW OF THE MATERIALS USED

ONLY CAREFULLY SELECTED MATERIALS ARE USED FOR THE PRODUCTION OF TRÄUMELAND ITEMS.

MATTRESS COVER

Cotton
Cotton is one of the most well-known and most widely-used natural materials. Cotton is breathable and highly durable. Therefore it is particularly suitable for use as a mattress cover fabric.

Certified organic cotton
KBA stands for controlled organic cultivation. Absolutely no artificial fertilizers, pesticides or defoliants are used.

Polyester
Polyester is a particularly durable and elastic fibre – therefore it is particularly suitable for mattress covers, and enhances them.

TENCEL™ (Lyocell)
With TENCEL™, a new age of fibre technology has been introduced. TENCEL™ is a cellulose fibre and is obtained from wood in an environmentally-friendly process. It unites the advantages of many fibres: as fine as silk, as strong as polyester, as easy to care for as acrylic, as cool and pleasant to the touch as linen, as warm as wool; it also absorbs substantially more water vapour than cotton.

Washable fleece
100% polyester | Washable fleece is a washable hollow foam that is ideally suited for babies with allergies. It has high resilience and adds cushioning to Träumeland mattress covers.

MATTRESS CORE

Cellflex foam
Cellflex is a particularly high-quality foam; a further evolution from cold foam. It is characterised by its highly open-pored cell structure and its high breathability and point-by-point elasticity.

Cellpur foam
Cellpur foam contains the natural raw material TENCEL™, which is obtained from wood. Due to the TENCEL™, this foam is highly elastic, absorbs moisture rapidly and thus creates an optimum, dry sleeping climate.

EMC® verde foam
The high-quality EMC® verde foam is characterised by its very high air permeability and the gel-like pressure distribution for relief of the spine. Castor oil is used to produce EMC® verde. It is extracted from the seeds of a tropical miracle tree, and is a natural, sustainable raw material.

Cold foam
In contrast to soft foam, raw materials of a higher quality are used in cold foams. Cold foam has better point-by-point elasticity characteristics, is more breathable and has a longer lifetime. The integration of air channels and contour cuts improves important factors such as ventilation and elasticity.

EMC® sensitive
Was originally designed for use in hospitals, due to its antibacterial effect. Therefore this foam is especially suitable for allergy sufferers.

Visco-elastic foam
This reacts to pressure and adapts optimally to your baby’s body. The open-pore structure makes the visco-elastic foam particularly breathable.

Visco-elastic gel foam
This foam is known for its temperature-regulating effect due to the integrated gel particles. It ensures optimum pressure equalisation and support of the spine. The open-pore structure makes it particularly air-permeable and suitable for use in a baby bed.

Special foam “Breeze”
10x more breathable than conventional cold foam. Guaranteed perfect air permeability, rapid humidity absorption and optimised thermal regulation.

3D air cushion layer
Due to their numerous individual polyester threads, 3D air cushion layers are incomparably breathable and extremely point-by-point elastic. This allows your baby to breathe more freely and sweat less.

Latexed coconut
The fibre cushion of the coconut is a purely plant-based padding material. Coconut fibres provide a dry sleeping climate and have good climatic properties. Latexed coconut is also sprayed with rubber latex which substantially improves the air permeability and above all the elasticity.

Natural latex
This highest quality form of latex is manufactured from the milk of the rubber tree. Natural latex is breathable, regulates temperature, is point-by-point elastic and has antiseptic properties which repel most bacteria and dust mites. Natural latex is therefore hypoallergenic.

Virgin sheep’s wool
Mattresses with a virgin sheep’s wool coating convince through high moisture absorption.
TEXTILES

3D air cushion layer
Due to their numerous individual polyester threads, 3D air cushion layers are incomparably breathable and extremely point-by-point elastic. This allows your baby to breathe more freely and sweat less.

4-hole high-tech hollow fibre
A hollow fibre is round and hollow inside. These fibres surround the body with a feather-light envelope which protects it from changes in temperature and promotes active air interchange.

Aloe vera
The natural extracts of the aloe vera plant can have a positive effect on sleep thanks to its skin-friendly properties. Aloe vera is hypoallergenic.

Polyester
Polyester is a particularly resistant, elastic fibre.

Cotton-satin / cotton-batiste
Fine-thread, silky fabric with a more or less glossy, structureless surface for high-quality textiles.

Special plastic springs
Special plastic springs stabilise wherever pressure is applied, and thus ensure unique lying characteristics in order to protect the spine. They are completely metal-free – as verified in numerous inspections, bedrooms should be kept free of metal as the Earth’s natural magnetic field can be disrupted.

Swiss stone pine
The Swiss stone pine grows in the high mountain regions under extreme climatic conditions and under controlled forestry management. The Swiss stone pine ensures a more rapid and efficient recovery process during sleep, is proven to repel moths and mites and prevents mould formation.

Cotton
Cotton is one of the most well-known and most widely-used natural materials. Cotton is breathable and highly durable. Therefore it is particularly suitable for use in a baby bed.

Down & feathers
In contrast to feathers, down is spherical and does not have a visible quill. It is also lighter. Träumeland products have the highest quality class and do not originate from a live plucking.

EPS beads
Fine, plush, noiseless beads are the ideal filling material for nursing cushions due to their high adaptability and pressure distribution.

Elastane
Elastane is an extremely stretchy and cuddly fibre which ensures high elasticity in the material.

Down fibre beads
Down fibre beads consist of a polyester fibre, plush up beautifully and are therefore excellent for nursing cushions and cuddly nests.

Certified organic cotton
KBA stands for controlled organic cultivation. This means that absolutely no artificial fertilisers, pesticides or defoliation agents are used.

Kapok
Kapok is water-repellent and therefore prevents the development of mites.

Microfibre
Microfibre is a collective term for fibres, which are finer, for example, than cotton or silk. Microfibre fabrics are extraordinarily soft and retain shape well.

PU membrane
The membrane is water-repellent, but not air-permeable.

Thinsulate
Thinsulate fibres are finer than ordinary polyester fibres. They offer perfect climate control and optimum dissipation of moisture.

Washable fleece
100 % polyester | Washable fleece is a washable hollow fibre that is ideally suited for babies with allergies.

Phthalate-free PVC
Phthalate-free PVC is free of chemical plasticisers, which are frequently used to improve the softness and stretchiness of a fabric or to make it easier to process. Träumeland changing mats consist of phthalate-free PVC foil.

Antibacterial polyester
The antibacterial treatment destroys microbes/germs on contact and thus provides permanent anti-bacterial protection.

Quality hollow fibre
A hollow fibre is round and hollow inside. These fibres surround the body with a feather-light envelope which protects it from changes in temperature and promotes active air interchange.

TENCEL™ (Lyocell)
With TENCEL™, a new age of fibre technology has been introduced. TENCEL™ is a cellulose fibre and is obtained from wood in an environmentally-friendly process. It unites the advantages of many fibres: as fine as silk, as strong as polyester, as easy to care for as acrylic, as cool and pleasant to the touch as linen, as warm as wool; it also absorbs substantially more water vapour than cotton.

Thermo fleece
Consists of 100 % polyester and provides a soft, cuddly pad for changing mats.
